

What Blepharoplasty Can—and Cannot—Fix

SurgeryViz · surgeryviz.com/resources/blepharoplasty-can-cannot-fix-chart

This chart organizes consultation questions. It cannot identify the structure causing an individual concern.

MAY ADDRESS	USUALLY DOES NOT ADDRESS BY ITSELF	NEEDS SEPARATE EVALUATION
• Excess upper-eyelid skin • Selected lower-lid bags or fat prominence • Selected eyelid contour concerns	• A low eyebrow position • True eyelid droop (ptosis) • Dark pigment, fine lines, or deep tear-trough hollows	• Dry-eye or eye-surface symptoms • Vision complaints or sudden change • Whether brow lift, ptosis repair, or no procedure fits better

Ask: Which structure is producing the change I notice, and what would remain unchanged after the procedure you are discussing?

Educational planning only. Clinics may print and share unchanged with attribution and source URL intact. Not for resale. Sharing does not imply endorsement.
